

BIO JET 7[®]

Dry Packs

BIO JET 7 Dry Packs are a biological aid designed to digest tissues, proteins, fats, oils and grease in residential applications:

- Septic tanks
- Residential wastewater systems
- Holding tanks

BIO JET 7 products are manufactured in the United States.

Dry Packs:

- Are non-hazardous and non-toxic
- Prevent odors and system failures
- Help wastewater systems perform at optimum treatment levels
- Minimize system and drain field failures
- Quickly dissolve in water releasing microbes that digest organic matter
- Are designed for homeowners to easily flush down the toilet
- Are safe for all plumbing
- Can be used as part of a preventative maintenance program
- Shelf Life: 2-4 years

A natural organic 

7 strain blend of non-toxic bacteria designed to enhance biological activity in wastewater treatment systems.

Residential System Suggested Dosage Rates:

Plant Capacity (Gallons per day)	Initial Dosage (Packs)	Maintenance Dosage (Each month)
0 - 1,250	1 pack	1 pack
1,250 - 2,500	1 - 2 packs	1 - 2 packs

* At initial start-up, apply for 5 days then follow regular maintenance. For severe applications, repeat initial dosage.
*Additional dosage guidelines can be found on the product label.

Note: BIO JET 7 application rates may vary based on system design, constituents present in effluent waters, loading rates and system retention time.

Available in a case containing 12 canisters (12-2oz packs per canister)
